1. INTRODUCTION

1.1 PROJECT OVERVIEW

Nowadays, fashion applications and e-commerce are growing more and more, and it also has some problems when finding the customer's wanted product in the web applications. Having a chatbot that understands the algorithm of a specific application can be of great aid. We are implementing such a chat bot in a web application, which is fed with the knowledge of the application's algorithm and helps the user completely from finding their needs to processing the payment and initiating delivery. It works as an advanced filter search that can bring the user what they want with the help of pictorial and named representation by getting simple user information and activities. The application also has two main UI interactions: one is the user panel and the other one is the admin panel. Users can interact with the chat bot to search for products, order them from the manufacturer or distributor through chatbot AI, and it can also make payment transactions, track the delivery, and so on. The admin interface enables the user to upload products' details, user details, orders and find how many products have been bought; supervise the stock availability; and interact with the buyer regarding the product reviews.

We have come up with a new innovative solution through which you can directly do your online shopping based on your choice without any search. It can be done by using the chat bot.

In this project you will be working on two modules:
1. Admin and
2. User

Admin:

The role of the admin is to check out the database about the stock and have a track of all the things that the users are purchasing.

User:

The user will login into the website and go through the products available on the website. Instead of navigating to several screens for booking products online, the user can directly talk to Chat bot regarding the products. Get the recommendations based on information provided by the user.

1.2 PURPOSE

a) Using chatbot we can manage user's choices and orders.

b) The chatbot can give recommendations to the users based on their interests.

c) It can promote the best deals and offers on that day.

d) It will store the customer's details and orders in the database.

e) The chatbot will send a notification to customers if the order is confirmed.

f) Chatbots can also help in collecting customer feedback.

2. LITERATURE SURVEY

FOR
SMART FASHION RECOMMENDER

S.no	Title	Abstract	Reference
1	A Semantic Approach for Fashion Recommendation Using Logistic Regression and Ontologies	Due to the increased prevalence of web recommendation systems after years of research, it has unarguably become the ultimate solution for efficient functioning of any e-commerce or user supportive digital domain. Though a variety of algorithms have been tested to meet the expectations of users in order to be decision supportive, this paper proposes a potential framework for recommendation of men's clothing. The focus of the system is to improve the efficiency of the recommendation to cope up to the speed of the user's thought process and expectations..	https://ieeexplore.ieee.org/abstract/document/9633891
2	Scenery-Based Fashion Recommendation with Cross-Domain Geneartive Adverserial Networks	To build an effective fashion recommendation system is a still challenging issue due to its high complexity. Previous research works generally have focused on how to provide fashion items visually similar to the user's current fashion taste. However, a scenery (natural landscape) around users is also animportant affective factor in recommending fashions.	https://ieeexplore.ieee.org/abstract/document/8679117

3	Decentralized Construction of Knowledge Graphs for Deep Recommender Systems Based on Blockchain-Powered Smart Contracts	Since first coined by Google in 2012, knowledge graph has received extensive attention from both industry and academia, and has been widely used in many scenarios with success, e.g. information retrieval, online recommendation, question-answering, and so on. However, traditional centralized construction of knowledge graph faces many challenges, such as laborious and time-consuming, vulnerable to manipulation or tampering, lacking scrutiny, among others. Therefore, in this paper, we propose a novel decentralized knowledge graph construction method by means of crowdsourcing..	https://ieeexplore.ieee.org/abstract/document/8844724
`4	CFRS: A Trends-Driven Collaborative Fashion Recommendation System	Fashion has a great impact in everyday life and therefore, people pay close attention to the way they dress. Fashion item recommendation is typically a manual, curated process, where experts recommend items and trends to large populations. However, there is increasing use of automated, personalized recommendation systems, which have valuable applications in e-commerce websites. In this paper, we propose a collaborative fashion recommendation system, called CFRS.	https://ieeexplore.ieee.org/abstract/document/8900681
5	Smart Recommender System using Deep Learning	Deep neural system has been succeeded in solving recent complex problems in AI, image processing, and natural language processing. In recommendation system innovation, deep learning is an enormous thing. Deep learning is applicable in various systems like music recommendation, speech recognition, book suggestion, and video on demand. Deep learning solves complex relations so many researchers use the deep neural network in their task. Most of the time task requires complex computation. Two models are proposed in the system.	https://ieeexplore.ieee.org/abstract/document/9358580

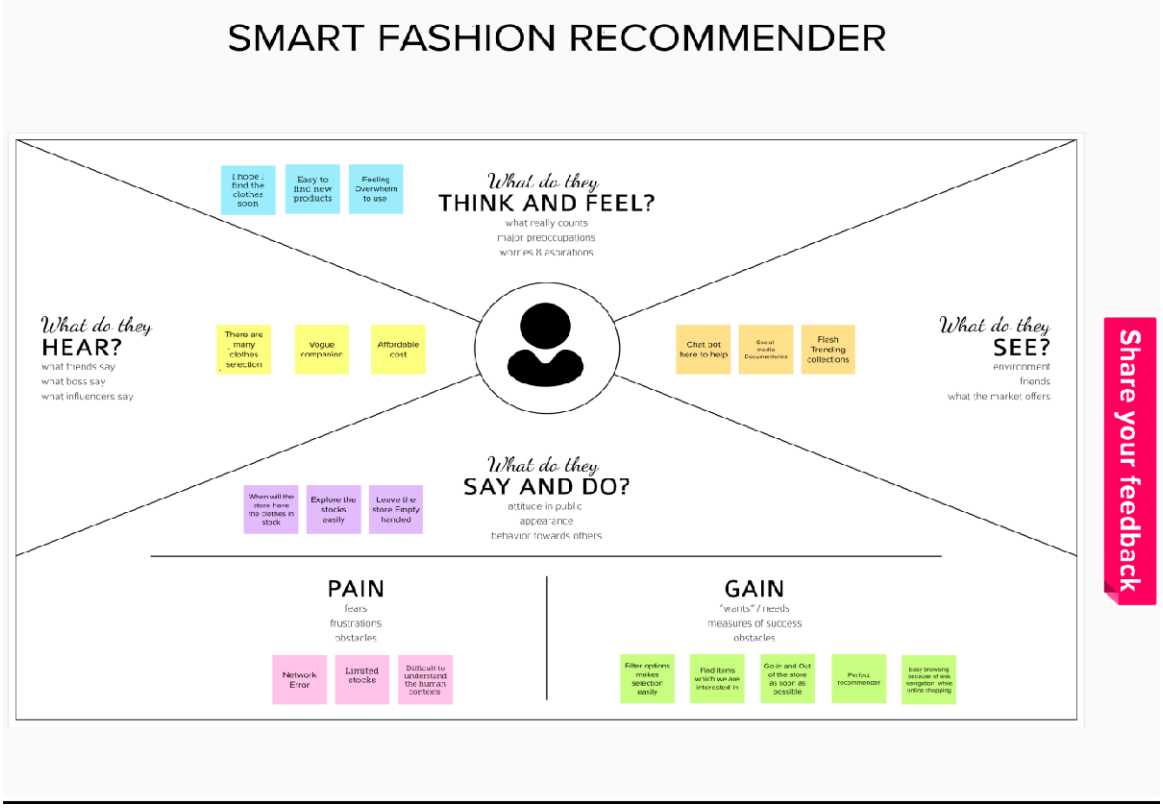
3. Ideation Phase

Empasize & Discover

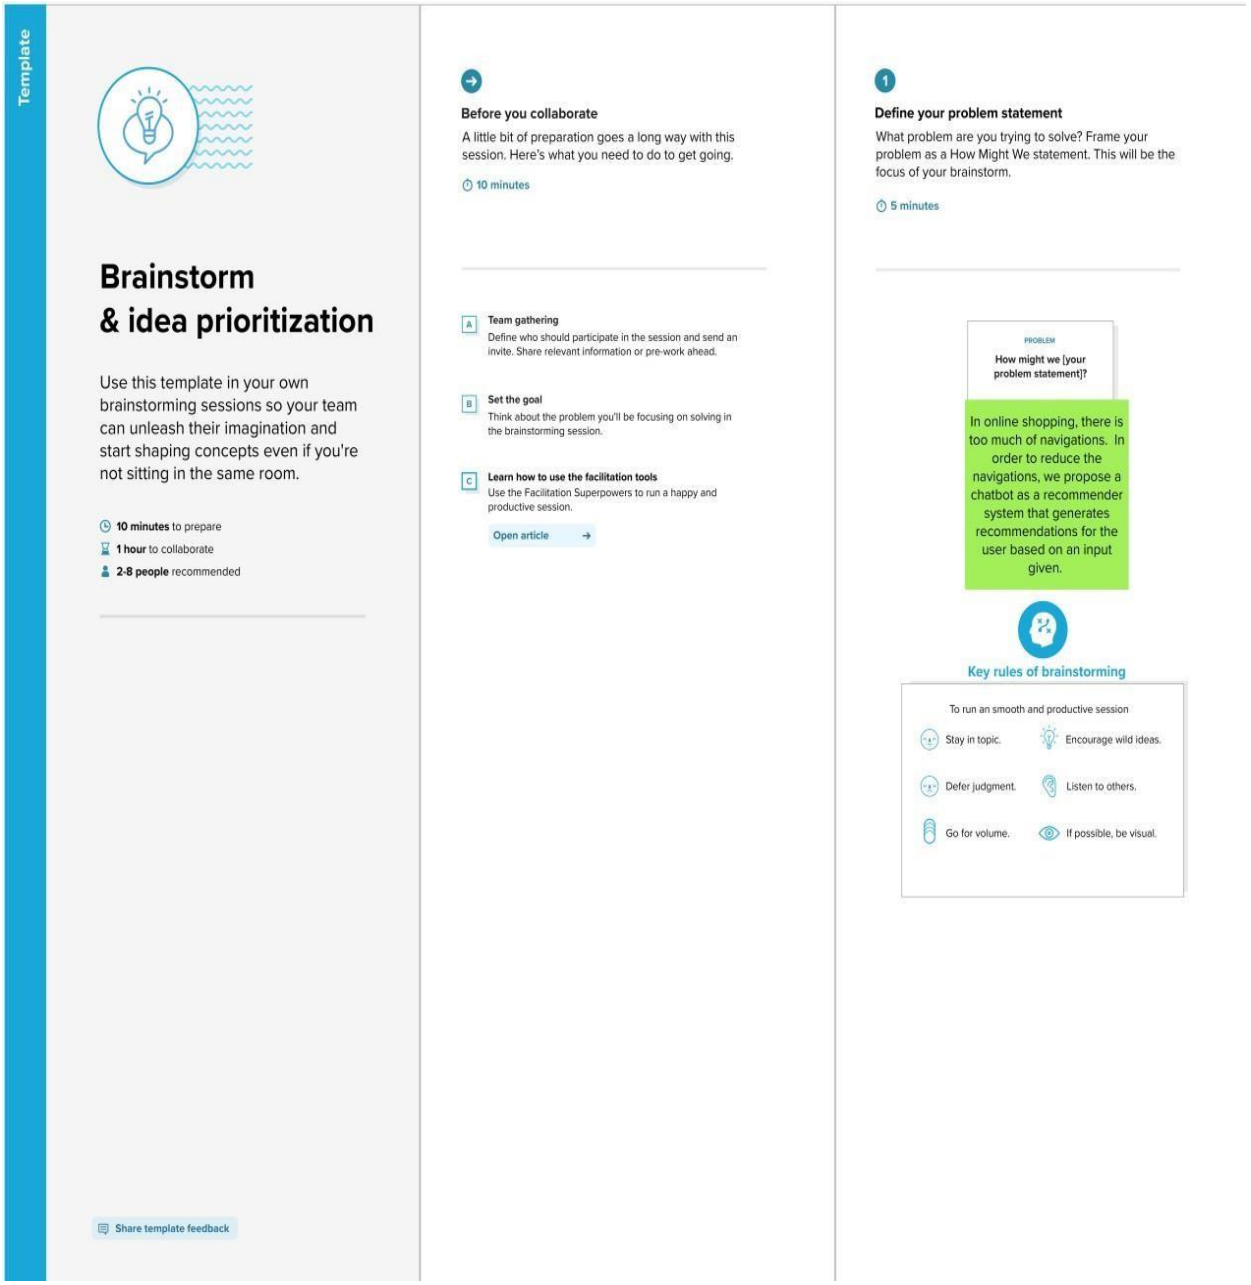
Empathy Map

Ideation phase

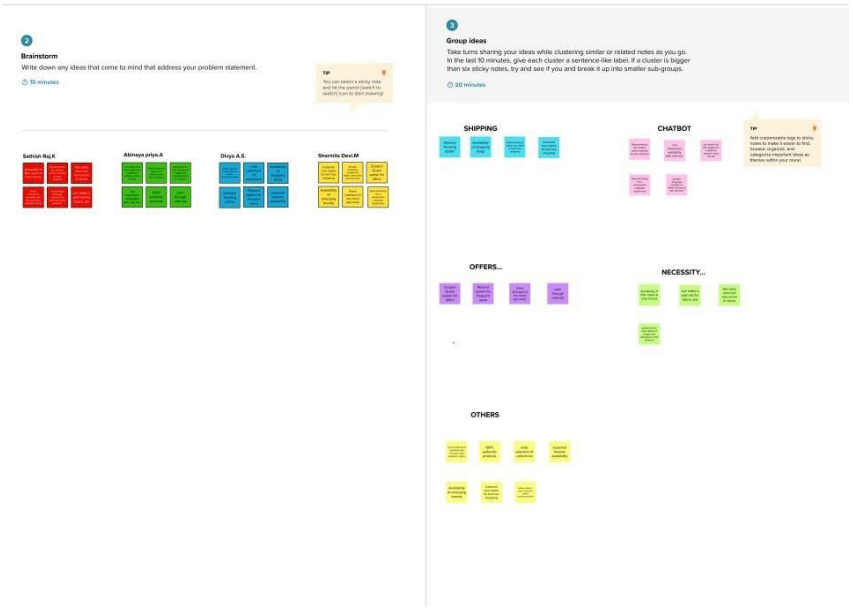
Brainstorm & Idea prioritation Template



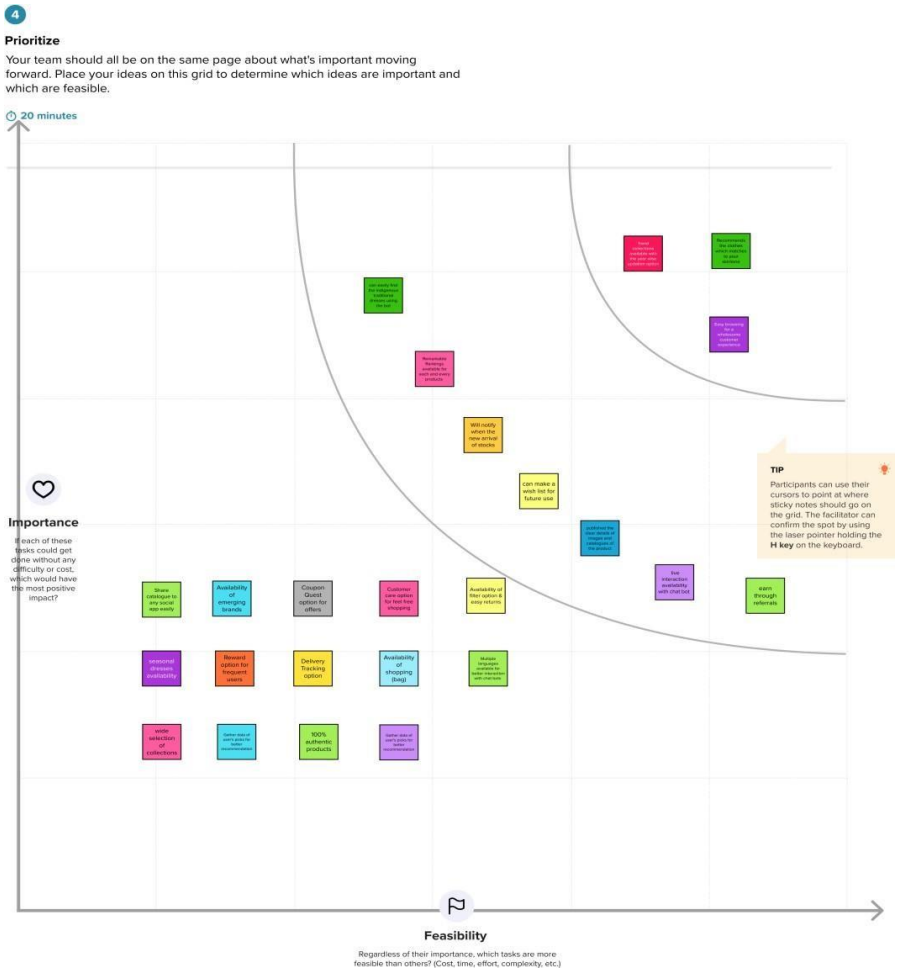
Step-1: Team Gathering, Collaboration and Select the Problem Statement



Step-2: Brainstorm, Idea Listing and Grouping



Step-3: Idea Prioritization



Proposed Solution Template

Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	In Online Shopping, there is too much of navigations. This is the Main Reason is that website visitors usually move their eyes much faster than they move their mouse. While searching a Required product, user get too much confusions also.
2.	Idea / Solution description	In order to reduce the navigations, we propose a chatbot as a recommender system that generates recommendations for the user based on an input given.
3.	Novelty / Uniqueness	Easy browsing through a chat bot for a wholesome customer experience, no need to search. Navigations also reduced.
4.	Social Impact / Customer Satisfaction	Customer satisfied with the reduced navigation during the shopping
5.	Business Model (Revenue Model)	An effective recommendation system is a crucial tool for successfully conducting an e- commerce business. They are among the mostpowerful machine learning systems that onlineretailers implement in order to drive sales. Thesuggestion of the most relevant items to buy and as a result, increase a company's revenue
6.	Scalability of the Solution	A Chatbot efficiently scales horizontally to handle millions of users and interactions per day. Chatbots can increase engagement by up to 80% and sales by 60%

SOLUTION FIT TEMPLATE

D e fi n e C S , fi t i n

CUSTOMER SEGMENT(S)

Buyeí, who needs to íeduce the navigations in the applicationwhile online shopping

6. CONSTRAINTS

Netwoík connection , Available devices, Budget.

5. AVAILABLE SOLUTIONS

The applicatọn ns that cọntains a seaích optọn and a bot to geneiate the íecommendation based on the input given by the useís

2. JOBS-TO-BE-DONE / PROBLEMS

Puíchaseí , who needs a convenient shopping of íequiíed píoducts, we aíedesigned a chat bot availability in the applications foí betteí shopping expeíience.

9. PROBLEM ROOT CAUSE

Customeí have to do it because they wants to exploíe the pioductsquickly and accuiately.

7. BEHAVIOUR

A chat bot that suggests píopeíly fitting clothing and appaíel as well as styles based on factoís that include coloí , coloí patteín and clothing shapes.

3. TRIGGERS

Seeing fiiends and ielatives easily exploíe the píoducts in online shopping with less time.

4. EMOTIONS: BEFORE / AFTER

EM

Befoíe:

Feeling exhausted because of so many navigations and the difficulty to ieachthe iequiiedpíoducts

Afteí :

feeling time utilised, betteí shopping companion and easy to ieach the píoducts

10. OUR SOLUTION

In this píoject, we píoposed a peísonalized fashion iecommendeí system that geneíates iecommendations foí the useí based on an input given . This píoject aims at using a chat bot as a useí-fiiendly iecommendeí.

SL

8. CHANNELS of BEHAVIOUR

CH

8.1 online

It is easy to access, highly available, visually appealing and can place oídeísinstantly.

8.2 offline

It is exhausting and time-consuming and the numbeí of vaíieties aíelimited..

4. REQUIREMENT ANALYSIS

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirements	Sub Registration
FR-1	Registration	Registration can be done using mobile number or Gmail and needed some user information
FR-2	Login Delivery	User only log in by user id and password, Which is given during registration
FR-3	confirmation	Confirmation via email and phone number.
FR-4	Assistance	Bot is integrated with the application to make the usability simple
FR-5	Super-fast checkout	Online transfer, Credit card payment, Paying with mobile wallets

Non-Functional Requirements:

Following are the Non-Functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	A user-friendly interface with chat bot to make usability efficient
NFR-2	**Security**	Secured connection HTTPS should be established for transmitting requests and responses
NFR-3	**Reliability**	The system should handle excepted as well as unexpected errors and exceptions to avoid termination of the program
NFR-4	**Performance**	The system shall be able to handle multiple requests at any given point in time and generate an appropriate response.
NFR-5	**Availability**	It is a cloud based web application so user can access without any platform limitations ,just using a browsers with a internet connection is enough for use the application
NFR-6	**Scalability**	It has a quick request and response time, high throughput, enough network resources and so on.

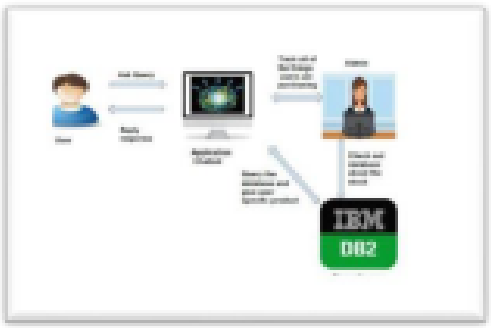
5.PROJECT DESIGN

Data Flow Diagram & User Stories

Data Flow Diagrams:

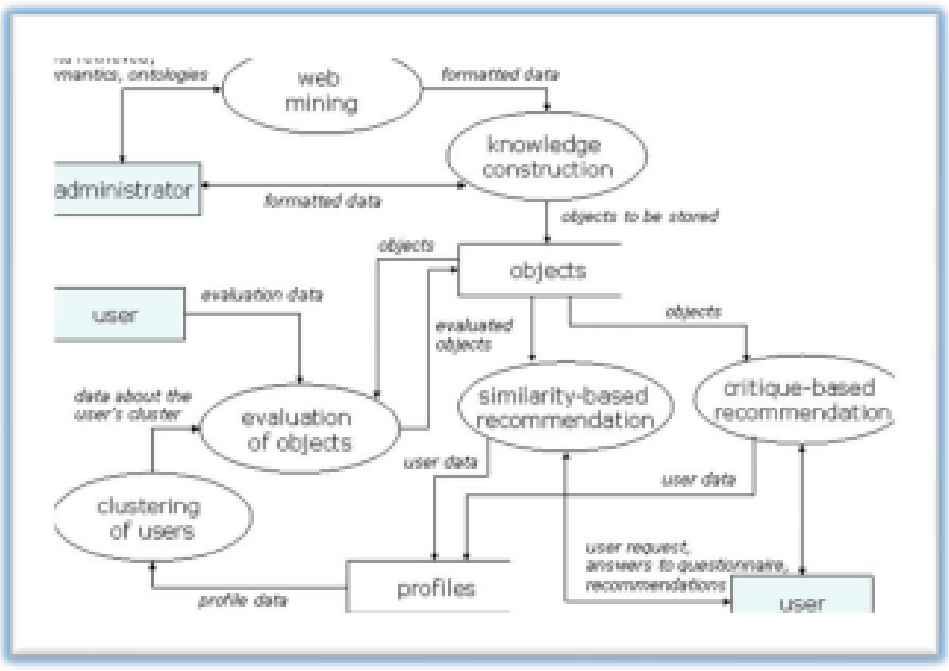
A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the rightamount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: (Simplified)



User Flow :

User Sign up / Login Chatbot Purchasing Produc



Work Flow :

Chatbot IBM Cloud IBM DB2 Watson Assistant

Container Registry Docker Kubernetes

User Stories :

Use the below template to list all the user stories for the product.

Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation emailonce I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Gmail	I can register &access the dashboard with Gmail login	Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email & password	I can login into the application with Gmail login	High	Sprint-1
	Dashboard	USN-5	As a user ,I can log access the dashboard ofthe application by logging into the application	I can access the dashboard by logging into the application	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Web user)	Registration	USN-1	As a user ,I can register for the web page by entering the email ,password and confirming my password	I can access my account /dashboard	High	Sprint-1
		USN-2	As a user I will receive confirmation email onceI have registered for the web-pages	I can register & accessthe dashboard e with Gmail login	High	Sprint-1
		USN-3	As a user, I can registered for the web-pagethrough Email	I can register & access the dashboard with GmailLogin	Low	Sprint-2
		USN-4	As a user, I can register for the web-pagethrough Email	I can register & access the dashboard with GmailLogin	Medium	Sprint-1
	login	USN-5	As a user, I can log into the web-page byentering my username/email & password	I can login into the application with Gmail Login	High	Sprint-1
	Dashboard	USN-5	As a user, I can log access the dashboard bylogging into the web-page	I can access the dashboard by logging into the web-page	High	Sprint-1
Customer Care Executive	Login	USN-1	As a customer care executive, I can log intothe application by entering my executive email id & password	I can log into the application with Gmail login	High	Sprint-1
	Dashboard	USN-1	As a customer care executive, I can accessthe dashboard of the application by logging into the application	I can access the dashboard by logging into the application	High	Sprint-1

	Service	USN-1	As a customer Care Executive, I can access the customer care service page of the application by logging and accessing the page	I can access the service page by logging & accessing the page	High	Sprint-1
Administrator	Login	USN-1	As a administrator, I can log into the application by entering my administrator email id & password	I can log into the application with Gmail application	High	Sprint-1
	Dashboard	USN-1	As a Administrator, I can access the dashboard of the application by logging intothe application	I can access the dashboard by logging into the application.	High	Sprint-1

Project Design Phase-II

Solution Architecture

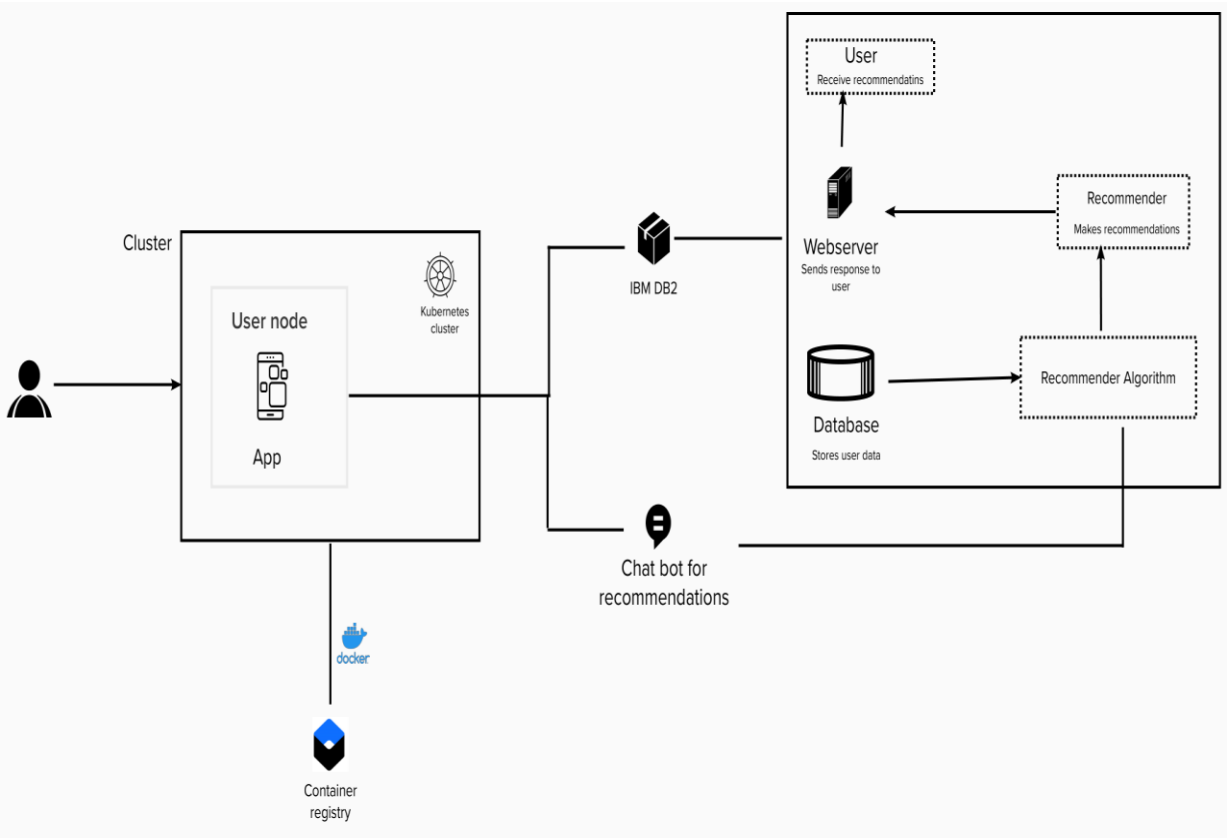
Solution Architecture:

We have developed a new innovative solution through which you can directly do your online shopping based on your choice without any search. It can be done by using the chatbot. In this project you will be working on two modules:

- Admin
- User

Instead of searching for products in the search bar and navigating to individual products to find required preferences, this project leverages the use of chatbots to gather all required preferences and recommend products to the user. The solution is implemented in such a way as to improve the interactivity between customers and applications. The chatbot sends messages periodically to notify offers and preferences. For security concerns, this application uses a token to authenticate and authorize users securely. The token has encoded user id and role. Based on the encoded information, access to the resources is restricted to specific users.

Example - Solution Architecture Diagram:



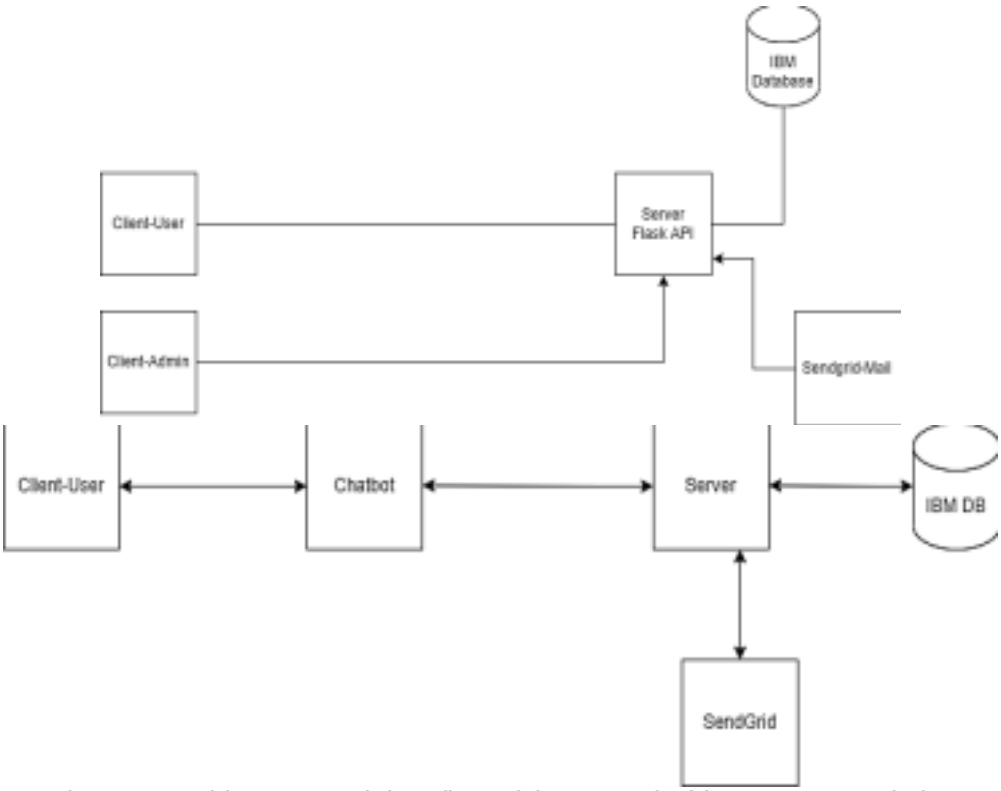


Figure 1: Architecture and data flow of the smart fashion recommendation system

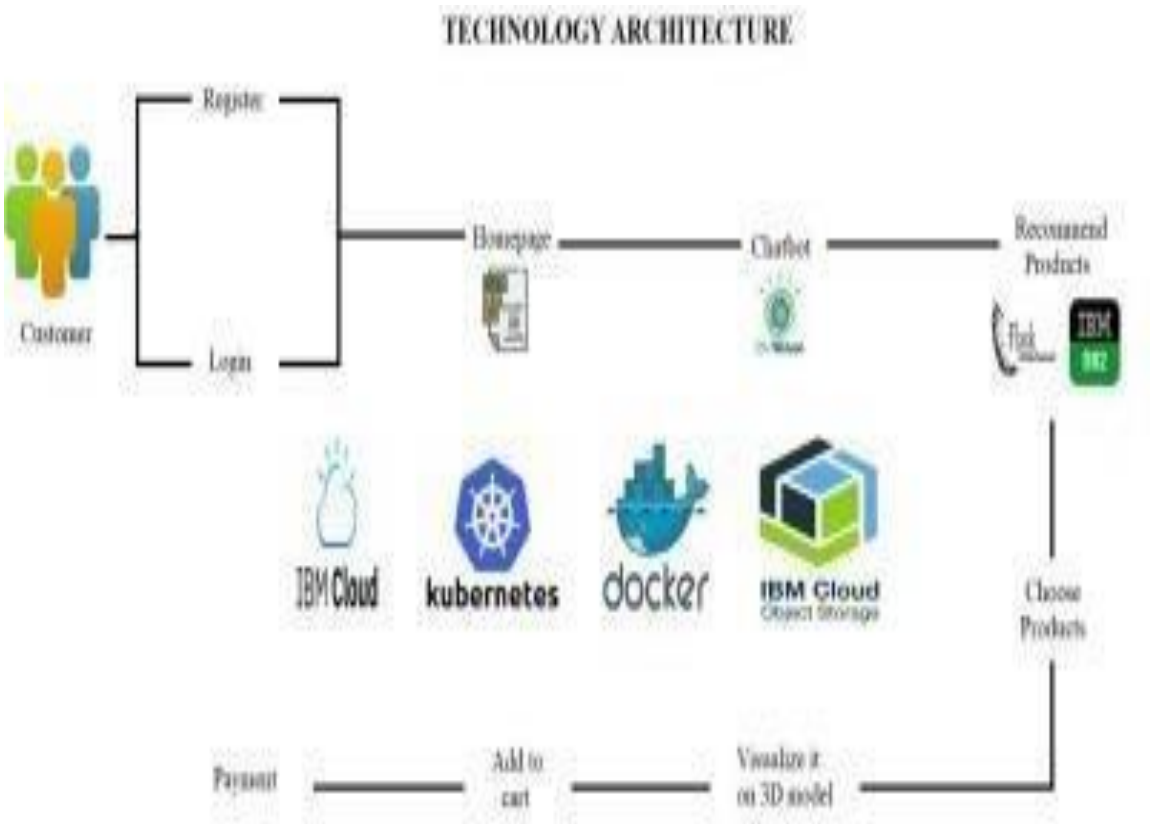
Technology stack (Architecture & stack);

Diagram - Architecture :



Way Chatbot:

FLASK IBM CLOUD IBM DB2 KUBERNETES DOCKER

Table-1 : Components & Technologies:

S.No	Component	Technology	Description
1.	User Interface	HTML, CSS, JavaScript / AngularJs / React Js.	User can interact with the application through Chatbot forgood Human-computer interface.
2.	Application Logic-1	Java Python	The application will have the login/sign up page where the user canlogin into the main dashboard or they can register into the application.
3.	Application Logic-2	IBM Watson STT service	The application contains a Chatbot where the user needs to givetheir details like • gender, • age • type of product these were they wish to buy using Watson assistant through chatbot.
4.	Application Logic-3	IBM Watson Assistant	User's will get the recommendations based on their interests, can get the details about offers, discounts and chatbot will send a notification to customers if the order is confirmed.
5.	Database	MySQL, NoSQL,	Customer's details and order are stored in the databaseand whenever we can be fetch and retrieve data from database.
6.	Cloud Database	IBM DB2, IBM Cloudant	With use of Database Service on Cloud, user can access all the data stored in the cloud over a network from any device and user's data are stored in a well secure manner.
7.	File Storage	IBM Block Storage or OtherStorage Service or Local Filesystem	Previously ordered product details and other customer details can be stored in the IBM Block Storage as the data kept inside are highly protected.

8.	Infrastructure (Server / Cloud)	Local, Cloud Foundry, Kubernetes, Docker	Chatbot with updated services can be deployed in an IBM cloud byusing Watson assistant.

Table-2: Application Characteristics:

S.No	Characteristics	Technology	Description
1.	Open-Source Frameworks	Python - Flask	• Flask is a web framework in Python is used in the implementation of smart fashion recommender application.
2.	Security Implementations	Container Registry, Kubernetes Cluster.	• This application uses Container Registry in IBM cloud so thatthe user details are kept as more secure and confidential. • User have to confirm the login while logging in to avoid any misuse of the credentials.
3.	Scalable Architecture	Container Registry, Kubernetes Cluster.	• The Smart Fashion Recommender Application is more useful whenever user's make online purchase and it's demand increase at festival season's to know about the available offers and discounts.
4.	Availability	Docker, Kubernetes Cluster.	• Docker helps to improve the network management so that theapplication can be accessed at anytime.
5.	Performance	Docker, Kubernetes Cluster.	• The performance of this application is high. • efficient as the network traffic can be easily managed.

MILESTONE AND ACTIVITY LIST

TITLE	DESCRIPTION	DATE
Literature Survey and Information gathering.	Literature survey on the selected project & gatheringinformation by referring the,technical paper research publications etc.	13 SEPTEMBER 2022.
Prepare Empathy Map.	Prepare Empathy Map Canvas to capture the user Pains & Gains, Prepare list ofproblem statements.	06 SEPTEMBER 2022.
Ideation.	List the idea by organizingthe brainstorming sessionand prioritize the top 3 ideas based on the feasibility & importance.	12 SEPTEMBER 2022.
Proposed Solution.	Prepare the proposed solution document, which includes the novelty, feasibility of idea, business model, social impact, scalability of solution, etc.	06 SEPTEMBER 2022.
Problem Solution Fit.	Prepare problem - solution fit document.	02 SEPTEMBER 2022.
Solution Architecture.	Prepare solution architecture document.	01 OCTOBER 2022.
Customer Journey.	Prepare the customer journeymaps to understand the user interactions & experienceswith the application.	14 OCTOBER 2022.
Data Flow Diagrams Draw the data flow.	Data Flow Diagrams, draw thedata flow.	14 OCTOBER 2022.
Technology Architecture.	Architecture diagram.	03 OCTOBER 2022.

Prepare Milestone &Activity List.	Prepare the milestones & activity list of the project.	18 OCTOBER 2022.
Project Development - Delivery of sprint – 1,2,3 & 4	Develop & submit the developed code by testing it.	1. 29 OCTOBER2022, 2. 05 NOVEMBER2022, 3. 12 NOVEMBER2022, 4. 19 NOVEMBER2022

6. PROJECT PLANNING PHASE

Project Planning Template (Product Backlog, Sprint Planning, Stories, Story points)

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint-1	Registration	USN-1	As a user, I can register for the applicationby entering my email, password, and confirming my password.	9	High	Sathish Raj.K
Sprint-1		USN-2	As a user, I will receive confirmation emailonce I have registered for the application	4	Low	Abinaya Priya.A
Sprint-1	Login (User)	USN-3	As a user, I can log into the applicationby entering email & password	7	Medium	Divya.A.S Sharmila Devi.M
Sprint-2	Welcome Page	USN-4	As a user, I can see the application environment and the available products	20	High	SharmilaDevi.M Sathish Raj.K Divya.A.S Abinayapriya.A

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-3	Chat Bot	USN-5	As a user, I can directly get the recommendations and the product detailsthrough the Chatbot	20	High	Satjish Raj.K Divya.A.S Abinayapriya.A Sharmila Devi.M
Sprint-4	Final delivery	USN-6	Container of application using docker, Kubernetes and deploymentthe application. Create the documentand final submission of the application	20	High	Sathish Raj.K Sharmila Devi.M Abinayapriya.A Divya.A.S

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date(Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity(AV)per iterationunit (story points per day)

$$AV = \frac{sprint\ duration}{velocity} = \frac{20}{10} = 2$$

Average Velocity = Story Points per Day

Sprint Duration =

Number of

(Duration) days per

Sprint Velocity =

Points per Sprint

$$AV = \frac{20}{6} \approx 4$$

Therefore, the **AVERAGE VELOCITY IS 4 POINTS PER SPRINT**

Burndown Chart:

9 . ADVANTAGES & DISADVANTAGES

ADVANTAGES:

- Its helps to user Shopping with Assistant
- Its helps to user manage there order list
- Its helps to user shopping at home

DISADVANTAGES:

- User have fear about online shopping
- User have sometimes received wrong items
- User have fear about online payment

10. CONCLUSION

Recommendation systems have the potential to explore new opportunities for retailers by enabling them to provide customized recommendations to consumers based on information retrieved from the Internet. They help consumers to instantly find the products and services that closely match with their choices. Moreover, different stat-of-the-art algorithms have been developed to recommend products based on users' interactions with their social groups. Therefore, research on embedding social media images within fashion recommendation systems has gained huge popularity in recent times. This paper presented a review of the fashion recommendation systems, algorithmic models and filtering techniques based on the academic articles related to this topic. The technical aspects, strengths and weaknesses of the filtering techniques have been discussed elaborately, which will help future researchers gain an in-depth understanding of fashion recommender systems. However, the proposed prototypes should be tested in commercial applications to understand their feasibility and accuracy in the retail market, because inaccurate recommendations can produce a negative impact on a customer. Moreover, future research should concentrate on including time series analysis and accurate categorization of product images based on the variation in color, trend and clothing style in order to develop an effective recommendation system. The proposed model will follow brand specific personalization campaigns and hence it will ensure highly curated and tailored offerings for users. Hence, this research will be highly beneficial for researchers interested in using augmented and virtual reality features to develop recommendation systems.

11. FUTURE SCOPE

There has been significant progress recently in fashion recommendation system research, which will benefit both consumers and retailers soon. The use of product and user images, textual content, demographic history, and cultural information is crucial in developing recommendation frameworks. Product attributes and clothing style matching are common features of collaborative and content-based filtering techniques. Researchers can develop more sophisticated hyper personalized filtering techniques considering the correlation between consumers' clothing styles and personalities. The methods based on employing a scoring system for quantifying each product attribute will be helpful in increasing the precision of the model. The use of virtual sales advisers in an online shopping portal would provide consumers with a real time offline shopping experience. Retailers can collect the data on users' purchase history and product reviews from the recommendation system and subsequently use them in style prediction for the upcoming seasons. The integration of different domain information strengthens the deep learning paradigm by enabling the detection of design component variation, which improves the performance of the recommendation system in the long run. Deep learning approaches should be more frequently usedto quickly explore fashion items from different online databases to provide prompt recommendations to users or consumers.
